

## Week 3 answers

### 1 Review

- derivational morpheme: changes category  
examples: *-ness*; *-able* in English
- inflectional morpheme: don't change the lexical category of the word  
example: *-s* in English plurals;
- simple word: has one morpheme
- compound/complex word: more than one morpheme

#### 1.1 Terminology

- compounding: word-forming from 2+ independent words
- alternation: morpheme-internal modifications  
example: man → men
- suppletion: when a root has irregular forms  
example: is → was; go → went  
*why english sucks for learners...*
- zero-derivation: when you change a word's category without changing its form at all  
example: run (noun) → run (verb)  
*KEVIN → KEVIN-ING!*
- blend: combining parts of existing words  
volunteer + told = voluntold  
*remember those snail memes where ppl combined sn- from snail with other nouns?*
- clipping: shortening a word by removing part of it- no change in meaning or category  
advertisement → ad
- reanalysis: when word or phrase boundaries are unconsciously shifted over time  
an napron → an apron

## 2 Identifying word-formation processes

- feed → fed: **alternation**
- leaf → leaves: **affixation (inflectional)**
- peace → peaceful: **affixation (derivational)**
- foot,ball → football: **compounding**
- good → best: **suppletion**
- chair,woman → chairwomen: **compounding; suppletion**
- back,pack → backpacks: **compounding, affixation (inflectional)**
- like → like-liked: **reduplication, affixation (inflectional)**
- go → underwent: **suppletion (go → went); compounding (under+go)**

### 3 Practice with trees

- disappearance

- silliness

- unthinkable

- overgeneralization

- internationalism

#### 3.1 Morphological ambiguity

- immeasurable

- unwrappable

- unbearable
